- Restoration of Function in the Management of Depressive Disorders
- Advances in Psychopharmacology in Schizophrenia
- Pharmacogenetic Testing
- Updates in Early Psychosis Management
- Perinatal Psychopharmacology
- Treatment of Somatization

ABOUT

This two-day psychopharmacology program will provide you with recent updates on the evidence and advances in best practices on the treatment of major psychiatric disorders.

The first day (Friday, November 25th) will focus on the **CANMAT Depression Guidelines 2016**, which have recently been published in the Canadian Journal of Psychiatry and represent a major revision of the previous 2009 Guidelines. This day will include keynote speakers on Depression across the Lifespan, Integrated Psychological Therapies in Major Depressive Disorder and treating Depression in Bipolar Disorder. It will also include workshops and panel presentations on key issues from the Guidelines.

The second day (Saturday, November 26th) will focus on **Difficult to Treat Populations** and will include sessions from international experts of the University of Toronto, Department of Psychiatry. Sessions will focus on the psychopharmacology updates in Early Psychosis, Schizophrenia, Anxiety Disorders, Bipolar Disorder and Substance Use Disorders. In addition, we plan to introduce novel sessions offering attendees an opportunity to earn required Maintenance of Certification Section 3 credits through chart audits and a facilitated session at the conference.
